EzyRings V1.04

Release Notes

25th May 2018

Reports

A new PDF interface has been implemented so reports can be generated into pdf documents. You have the choice to create a single multi page pdf document containing all the selected reports, or you can produce a single page pdf document for each selected report.

The collar markup report could crash if there are missing reference points in pivots table. In the case of missing reference points for a ring, the ring is now ignored for the produced collar markup report.

The EzyRings watermark logo is now positioned correctly for collar markup reports

If you added fixed text or images to your reports via the reports designer you could not later remove them. This issue is now fixed.

System & Configuration

It was possible that a blank rig name could get added to the rig configuration file. This later caused reports to crash. It is now not possible to add a blank rig name

EzyRings V1.03

Release Notes

26th March 2018

Sectioning

The scheduling report can now be created as an Excel spreadsheet
Fixed problem where additional solids were not being sectioned

Design

A new design session cannot be started while one is in progress
Now correctly clears graphics when exiting EzyRings
Fixed an ODBC issue where long fractional numbers could upload garbage to the database

Database

When the length or hole dip is modified the toe coordinates are automatically updated
Automatically redraws the ring view whenever a change is made
Added function to sort holes ascending and sort holes descending to the ring popup menu
Added function to copy all ring designs for a drive to the charges table on the ring popup menu
Added function to copy all ring designs for a drive to the drilling table on the ring popup menu
Fixed bug with not saving tables
Fixed bug where by modifying holes caused charges to be deleted

Reporting

New drive report templates for Collar Markup plans
New features in the reports

1. Can now include drive name on the plot
2. Can now include stope name on the plot
3. Can include custom text onto the plot
4. Can include custom images onto the plot

Now uses different icons for dfg and xls reports
Added ability to double click on the report names
Fixed the report description scroll problem
Added colour fields for company header
